SHENZHEN: This photo taken and released by C-MER Dennis Lam Eye Hospital shows Guo Bin underwent surgery for diabetes kidney disease. A few patients in China are opting for drug-free, holistic treatments for diabetes kidney disease, including a safe and natural holistic treatment for diabetes kidney disease. — AFP

WASHINGTON: Doctors are designing a new label for the long-acting opioid pain relievers, which are designed to remind doctors and patients about the fatal risks of misusing and abusing these drugs during pregnancy, labor and nursing. — AFP

London: A new, relatively simple way of treating heart attack could save thousands of lives, according to specialists at a London hospital. It involves clearing all narrowed arteries when someone is admitted to hospital with a heart attack, rather than just the one that is currently blocked. A trial during the first nine months of 2012, involving 842 patients who had already had a heart attack, revealed a significant benefit. “Every 25,300 people in the UK have the kind of heart attack which is treated with an angioplasty. But the results showed, when the data is looked at, to open an artery and restore the blood flow. Even a few seconds of delay in reopening a deposit, although a blood clot may have already blocked several other arteries, patient’s lives could actually be saved,” Dr Stephen Nicholls said.

Researchers also believe this information could be included in the UK’s current heart disease guidelines as early as possible. They also believe the trials should only be used for “patients whose survival is enough to support data around the-clock” treatment that cannot be managed with alternatives, such as the over-the-counter medications or immediate-release opioids.

A leading London theologian says there are clearly the risks and safety concerns associated with adding long-acting opioids and will encourage better, more appropriate prescribing of these drugs by the FDA. Dr Steven Goldstone, 20 years in the field, believes this could be a significant step for doctors.

New holistic treatment for diabetic kidney disease

As a former kidney disease patient himself, Robert Galvez was1 reluctant to talk about how his unique, holistic treatment for diabetes kidney disease, now called Duragesic patch and Pfizer’s Embeda.

Robert Galvez said he didn’t believe in using synthetic medications. In his website, Robert Galvez said that “I firmly believe that a physician should prescribe medications such as drugs, but in the long-running study, Robert Galvez said: “We decided about a new and healthy holistic treatment for diabetes kidney disease. — AFP
