**MUMBAI:** The Mumbai neighbourhood made famous by the film “Slumdog Millionaire” is set to host its first “biennale,” aiming to promote health through creativity, although it will be very different to some of the world’s grander art fairs.

The three-week festival, opening today, will showcase works created by residents of Dharavi, the densely populated settlement in the heart of India’s financial capital that is known as one of Asia’s biggest slums. From hand-printed t-shirts to paintings, from even routine infections to the list. —AP

The study by the American Cancer Society and several universities, published in Thursday’s New England Journal of Medicine, looks beyond lung cancer, heart disease and other conditions already tied to smoking and adds breast cancer, prostate cancer and even routine infections to the list of diseases already tied to smoking and says an additional 60,000 to 120,000 deaths each year in the United States are probably due to tobacco use. The study by the American Cancer Society says an additional 60,000 to 120,000 deaths each year in the United States are probably due to tobacco use.

Researchers looked at nearly 1 million deaths, from various causes among smokers, never smokers and former smokers, taking into account other things that influence risk such as alcohol abuse.

Researchers found. The researchers found. Death rates were two to three times higher among current smokers than among people who never smoked. Most of the excess deaths in smokers were due to 21 diseases already tied to smoking, including lung and other cancers, heart disease, stroke and diabetes. But researchers also saw death rates in smokers twice as high from other conditions such as kidney failure, infections, liver cirrhosis and some respiratory diseases not previously tried to smoking.

One strong sign is that the risk of dying from these diseases increased two to four times among people who quit smoking. The longer ago they stopped, the greater the drop in risk time went on. —AP

**NEW YORK:** Breast cancer, prostate cancer, and even routine infections. A new report ties these and other maladies to smoking and says an additional 60,000 to 120,000 deaths each year in the United States are probably due to tobacco use.
