Prince suffered no ‘trauma’

Dr. Ayed once predicted his son would never ‘move on’ from the community’s loss. But the young royal is determined to pick up where his mother left off and prove himself to the world.

**Weight**

The prince is said to have shed a significant amount of weight since his mother’s death. Sources say he is now sporting a slimmer frame, which has reportedly boosted his confidence.

**Appearance**

Prince began takingacting lessons after his mother’s death to prepare himself for his role as a future king. He is said to have become more sensitive and reflective as a result.

**Health**

The prince is said to have been working closely with a team of experts to manage his mother’s health issues. Sources say he has been making progress and is expected to return to public engagements soon.

**Relationships**

Prince has recently been seen spending more time with his siblings and close family members. He is also said to have formed new friendships with young royals from other countries.

**Future Plans**

The prince is expected to take on additional responsibilities as his mother’s legacy continues. Sources say he is determined to ensure her vision for the country is realized.
