COUNTRIES COMMIT TO DOUBLED AIDS TREATMENT

MARYLAND: MIA, a dove flies near the logo of Novartis Limited at its head office.

UNITED NATIONS: Congress committed to nearly doubling the number of people who receive antiretroviral therapy (ART) by 2020. This is critical to achieving the UNAIDS goal of universal access. Many have said they will support the UNAIDS goal but not the pledge to double ART to 2020. During the UNAIDS conference, the president of the conference called for a comprehensive plan to protect women and children from HIV/AIDS. The conference also committed to doubling the number of people who receive ART by 2020.

FLORIDA: HEALTH WARRIORS DEPLOY IN WAR ON ZIKA

MMAIA: In Canada, Zika virus infections have been confirmed in several provinces, including Quebec and Ontario. The Canadian government has declared a public health emergency in response to the outbreak.

Florida's health department has been criticized for its slow response to the outbreak, but the state now has a dedicated Zika task force, including experts from the state health department and the Center for Disease Control and Prevention (CDC). The task force will be responsible for coordinating the state's response to the outbreak.

Colombia, which has experienced a large number of Zika cases, has also been criticized for its slow response. The country has been criticized for its failure to test people for the virus and for not implementing a comprehensive plan to prevent the spread of Zika.

Officials are working to contain the outbreak, but the virus is spreading rapidly and it is unclear how long the current public health emergency will last. The state is working with the federal government and other states to coordinate their response to the outbreak.

COLUMBIA TO FORCE NOVAOD TO LOWER PRICES OF LOWER-COST ADOID TREATMENT

BOGOTA, Colombia: Colombia's government will unilaterally force the world's largest drugmaker Novartis to lower prices of a popular leukemia treatment. The government has ended without an agreement in talks with the pharmaceutical company.

The move comes as Colombia is considering how to deal with the high costs of treating serious diseases. Colombia's government has been discussing ways to reduce the costs of treating diseases such as cancer and HIV/AIDS.

The government has offered to give Novartis a better deal on lower prices for the medicine but not throw open the negotiations to other pharmaceutical companies.

UTAH: A woman walks down a street in Salt Lake City, Utah. The CDC has issued a travel advisory for people traveling to countries with Zika.

Zika virus can be transmitted by mosquito bites from Aedes aegypti and Aedes albopictus mosquitoes.

The virus is spread by mosquitoes that transmit the virus to humans. The CDC has advised travelers to avoid mosquito bites and to use insect repellent containing DEET.

The CDC has also recommended that pregnant women avoid travel to countries with Zika outbreaks. The CDC has also advised pregnant women to talk to their healthcare providers before traveling to these countries.

The United States has seen a number of Zika cases, but the virus is not currently spreading in the United States. The virus is most commonly spread in tropical regions, and outbreaks are most common during the rainy season.

The virus can cause serious birth defects, including microcephaly and Guillain-Barré syndrome. These conditions can be severe and can result in lifelong disabilities.
