KHALIA LUMBO: Malaysia used a DNA sample from one of Kim Jong-Nam’s children to confirm the identity of his father, North Korea’s leader Kim Jong Un, deputy prime minister Ahmad Zahid Hamidi said Wednesday. “The result has finally taken off the mystery,” Zahid told reporters. “It’s a result that meets our expectations.”

Zahid said experts from the two countries began official talks on Monday to resolve the crisis after North Korea and Malaysia were agreed to get a DNA sample from one of Kim Jong-Nam’s children. Malaysia then sent the DNA sample to forensic experts in Kuala Lumpur for analysis.

Zahid said experts from the two countries began official talks on Monday to resolve the crisis after North Korea and Malaysia were agreed to get a DNA sample from one of Kim Jong-Nam’s children. Malaysia then sent the DNA sample to forensic experts in Kuala Lumpur for analysis.

When the DNA sample was sent to the lab, it was found that the result is clear and unambiguous. The sample is a confirmation that Kim Jong-Nam was Kim Jong Un’s biological father, not a half-sibling, as North Korea has previously claimed. Zahid said the DNA analysis was completed by experts from both countries and that the result was sent to South Korea for further confirmation.

The result is a major breakthrough in efforts to resolve the crisis between South Korea and North Korea, which has escalated over the past week. North Korea has threatened to abandon denuclearization talks and to disrupt ongoing international negotiations.

The DNA test confirms that Kim Jong-Un is the legitimate son of Kim Jong-Nam, who was killed in February on a flight from Kuala Lumpur to Macau. The result has important implications for the future of the Korean peninsula and the broader region. It could also have implications for ongoing efforts to resolve the North Korean nuclear crisis.
