is why the authorities are moving so fast because there is no clue as to how long or how this can evolve. That is the failure of the dam, US National Weather Service officials quickly realized. An engineer inspecting the dam reported a “rounded breach” on the right side. It was a crack that could be the first sign of total failure of the dam. Maldonado, a natural disaster specialist, said it was an example of how much can be done when the government is ready.

Her decision to lead the American delegation, which includes veterans from the Ventura County Sheriff’s Office in California, was backed by the Department of Defense. She said she had visited Jordan before and had seen the difference that the US government could make in the region.

She thanked him for his service and his dedication to the country. “We are proud of you and what you have done,” she said.

She also thanked the other members of the American delegation, who were all from different parts of the US. “We are all here because of the same reason,” she said.
